

ABSTRACT OF THE DISCLOSURE

APPARATUS AND METHOD FOR ENABLING COMPOSITE STYLE SHEET APPLICATION TO MULTI-PART ELECTRONIC DOCUMENTS

5 An apparatus and method for enabling composite style sheet
application to multi-part electronic documents is provided. The
apparatus and method identify content of a requested electronic
document and determine subset style sheets that correspond to the
identified content. Certain ones of these subset style sheets
are selected based on, for example, requesting device
100 characteristics, for use in generating a composite style sheet.
The selected subset style sheets are then merged with a global
style sheet to generate a composite style sheet that may be
applied to the electronic document for proper presentation on a
requesting device.
